Education

CVR College of Engineering | 8.90

Sep 2023–2027

Bachelor of Technology (BTech) | (JNTUH) Jawaharlal Nehru Technological University, Hyderabad

Skills

Concepts: Machine Learning, Deep Learning, Computer Vision, NLP, LLMs, Agentic AI, RAG, AI/ML, RESTful APIs, Microservices, JWT Authentication, Swagger/OpenAPI

Programming Languages: Python, Java, TypeScript, JavaScript, SQL, C

Frameworks & Libraries: FastAPI, NestJS, Express.js, Node.js, React.js, Svelte, Bootstrap, Prisma, Zod, JSON Schema

Databases: PostgreSQL, MongoDB, MySQL, Redis

Technologies: Google Cloud, AWS, Docker, CI/CD, Git, Postman, npm.

Experience

Applied AI Engineer | The Intersections (Internship)

Jun 2026 – Present

Hyderabad, Telangana, India · Hybrid

- Took ownership of building **ilx-datatable**, a data table component built with Svelte for product development use, and published it as an **npm package**.
- Took ownership of **VMPire**, a competitive-education platform: architected the system end to end, designed an **AI-driven workflow** with an **NLP-powered chatbot**, and built it using an **agentic workflow with Claude**, spawning sub-agents orchestrated through a **context-aware mono-repo structure**.

AI Agent Evaluator | Deccan AI (Freelance)

Dec 2025 – Present

- Mapped critical **AI agent tool-calling** interaction surfaces within Spotify control and call-automation workflows, driving a **10% reduction in agent failure rate** across evaluated action sequences.
- Evaluated agent decision-making across multi-step action sequences in **LLM-driven pipelines**, isolating incorrect **tool-selection and execution failure modes**.
- Reviewed **dual-agent workflows** under Action Extension v2, validating **inter-agent coordination** and task-completion quality for AI product-development use cases.

Projects

[Pramana—AI-Powered Fact Verification App](#)

Sep 2025–Jan 2026

- Led development of a **multimodal ML classification pipeline** for misinformation and fraud detection, reaching **75% claim-classification accuracy** across text and image inputs, served through a FastAPI backend on Google Cloud.
- Built **RAG-inspired preprocessing pipelines** for context retrieval and fact-checking API integration, cutting inference latency by 35% and payload size by 40% while sustaining a **2.7s end-to-end response time**.

Technologies: Python, FastAPI, Machine Learning, NLP, Google Cloud, Kotlin, Jetpack Compose

[Sizuka—AI Talent Scouting Agent](#)

April 2026–May 2026

- Engineered an **end-to-end AI recruitment pipeline** that converts job descriptions into ranked candidate shortlists via GitHub-based discovery, profile analysis, **LLM-based matching**, and automated outreach.
- Built a **multi-stage agentic pipeline** with **LangGraph** and **FastAPI** for candidate scoring, email generation, conversational follow-ups, and recruiter feedback loops, integrating PostgreSQL, Redis, BullMQ, and a React-based real-time monitoring dashboard.

Technologies: Python, FastAPI, LangGraph, React.js, NestJS, PostgreSQL, Redis, BullMQ, GitHub API, LLMs, NLP

Achievements

- Placed in the **Top 3** at the **Deccan AI Catalyst 2026 Hackathon** — catalyst.deccan.ai/winners.html

Open Source Contributions

- Diagnosed a **segfault in Blaze** (sourcemeta), a C++ JSON Schema validator, tracing it via LLDB to **unbounded recursion in reference-cycle handling**; filed [issue #1054](#) and collaborated on the fix and **regression tests** in [PR #1055](#).
- Resolved an **MCP response-contract bug** in Twenty CRM ([#18524](#)) — corrected an invalid payload shape and HTTP 201 status code, and added **regression tests** for tools/list, prompts/list, and resources/list.
- Fixed **orphan navigation/menu-integrity issues** in Twenty CRM ([#18791](#)) via cleanup logic, **state synchronization**, and regression tests.
- Contributed to JSON-Schema-Test-Suite ([#867](#)), improving **documentation clarity and terminology consistency** while preserving existing test semantics.
